#### **DETAILED ACTION**

This is the first action relating to serial application number 10/621,135, filed 07-16-2003. Claims 1-6 are currently pending.

### **Priority**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### **Drawings**

2. Figure 8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 4. Claims 1-6 are rejected under 35 U.S.C. 102(a) as being anticipated by Figure 8, applicant prior art. Applicant's prior art Fig. 8) clearly anticipates the claimed invention

Application/Control Number: 10/621,135

Art Unit: 3682

1, 1

and it is apparent that an angle  $\theta$  between the oblique cam and the cam guide surfaces is  $15^{\circ} < \theta < 70$  such that the relationship between the height h of the teeth of the rack and the minimum backlash X is X=h/tan $\theta$ . It should be noted that the minimum backlash will occur at a distance h which is the horizontal component of the upward movement of the cam and this distance is allowed to clear the corresponding teeth of the cam which inherently is the height of the teeth of the ratchet and the X distance is the vertical component of the movement of the cam an the angle  $\theta$  for the distance h. Therefore, there must be a relationship between the angle and the vertical and horizontal components of the movement of the cam such that X will always be equal to h/tan $\theta$ .

#### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. JP(2000-136861), JP(01-229152), JP(2003-194165), EP(1188955), EP(1319868) and EP (1323950) disclose a tensioner with a plunger in a housing, the plunger includes ratchet teeth and a pawl engaging the ratchet to retard the movement of the plunger.

j

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marcus Charles whose telephone number is (703) 305-6877. The examiner can normally be reached on Monday-Thursday 7:30 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bucci can be reached on (703) 308-3668. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
